

Dr. Chengqi (Charley) Wang is an Assistant Professor and Director of the USF Genomics Program Sequencing Core at the University of South Florida. His research integrates computational genomics, epigenetics, and machine learning to uncover molecular mechanisms driving health disparities and infectious disease outcomes. Dr. Wang works closely with Dr. Monica Uddin and Dr. Derek Wildman on the Detroit Neighborhood Health Study, where he leads multi-omics analyses to explore how microRNAs mediate the relationship

between social adversity and post-traumatic stress. He has authored over 40 peer-reviewed publications, including papers in *Science*, *Cell*, *Nature Communications*, *Genome Biology*, *Genome Research*, *Nucleic Acids Research*, and *The EMBO Journal*, and contributes to multiple NIH-funded initiatives focused on mental health, malaria, and systems biology.
