

**Clinton Collins, Cyberinfrastructure Director
UF Interdisciplinary Center for Biotechnology
Research**

I am an information technology manager with many years of experience leading technical teams. I really enjoy solving problems for end users and using technology to make business processes more efficient and less prone to error. My role at ICBR is to manage the team that keeps instruments and computers running and up to date, keeps data secure, and brings new technology to our center to enhance the research mission for the University of Florida. Moving large amounts of data quickly and securely from our instruments to our customers is always a top priority and challenge for myself and my team.
