

Dr. White is both an Investigator and research administrator. In her role as Assistant Professor, she dedicated herself to enhancing the quality and coordination of care for children with disabilities and complex health needs. Her research focuses on family navigation and care coordination, healthcare systems research and models, social and community support for children with disabilities, research engagement among caregivers and people with intellectual developmental disabilities, and delivery of genetic information to families.

She also currently services as Program Manager for Shared Facilities at Cincinnati Children's, she provides support and oversight for over 30 Shared (Core) Facilities. Dr. White is actively engaged with the Association for Biomolecular Resource Facilities (ABRF) and is a FASEB Fellow of the Future in which her focus is to advocate for people with disabilities in the STEM field.
